REINVENTING TOMMORROW'S MOBILITY

# Concept

What if, in a second, you could transform any bike into an electric vehicle?

The ideal transportation system will be, the one that will be able to convince a large number of users. For that, it has to compete with cars in terms of uses and allow us to move in a more sustainable way without having to make concessions on our habits, our comfort, or our freedom of route...

Evo Pods is an innovative transportation system that aims to reduce the use of the car in our daily commutes by addressing all these issues. Thanks to a network of rental stations distributed all around the city, we offer access to shells (or pods) allowing, in a few seconds, to convert any bike into an electric, rapid, ecological, weatherproof vehicle.

DOOR-TO-DOOR

RELIABLE

WEATHERPROOF

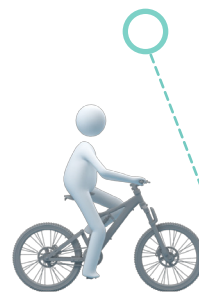

SUSTAINABLE

HEALTHY

FUN

## FIRST STEP

Dust off your old bike and take it out in the street!

## SECOND STEP

Simply get to an Evo Pods station.

## THIRD STEP

Plug your bike into a pod and turn it into an electric, weatherproof, comfortable and sustainable vehicle.

## FOURTH STEP

Go shopping, take your children to school or carry a friend, the possibilities are numerous!

## Hardware and software are closely linked

Evo Pods it is also an app to simplify users life and to help daily commutes.

- Real time network map and pod booking
- Turn by turn navigation
- Statistics and metrics
- Challenges and achievements
- Account management
- Rewards shop
